SUMMARY

I have always been passionate about technology and even started my career as an IT manager. However, I wanted to be more involved in the technical part of the process and after a few years of being in and out of the IT world, I decided to chase my passion and become a web developer.

I think that code is a tool for visual creation. I get such joy from building code that transforms your ideas into something real. I really enjoy communicating ideas, collaborating, and sharing knowledge and skills.

I have recently graduated from Enspiral Dev Academy, where I practiced agile methodologies and had experience in dev tools while developing a range of software applications and working in diverse teams. For the final project, my team and I created a complete web app from scratch, both the back end and the front end using HTML5, CSS3, React, Redux and MySQL. I had an opportunity to demonstrate an ability to learn fast and work with strict deadlines and apply my skills while learning new tools and technologies and communicating with the team.

KEY SKILLS

Technical skills

- JavaScript, ECMAScript 6.
- React.js, Redux, JSX.
- Node.js, Express.js, Handlebars.js (server-side rendering and APIs).
- MySQL, Knex.js, PostgreSQL.
